

# HAILSTORM

BY:GEORGE DOMINGUEZ

Let me tell you what is a hailstorm. a hailstorm is one of the most dangerous storms out there the size of a hail ball is like the size of a computer mouse. This storm can kill a person and the damage that it does to a person is the worst thing u want to see.

WHAT IS IT

A decorative graphic consisting of several parallel white lines of varying lengths, slanted diagonally from the bottom right towards the top right, set against the orange background.

- ▶ Hailstorms are made by thunderstorms or produced by them. By having strong tilted updrafts hailstorms within a unusually unstable air mass

WHAT CAUSES IT

- ▶ To predict the Hailstorm is coming you can use supercomputers and simulations. There are also some computer centers that are advanced.

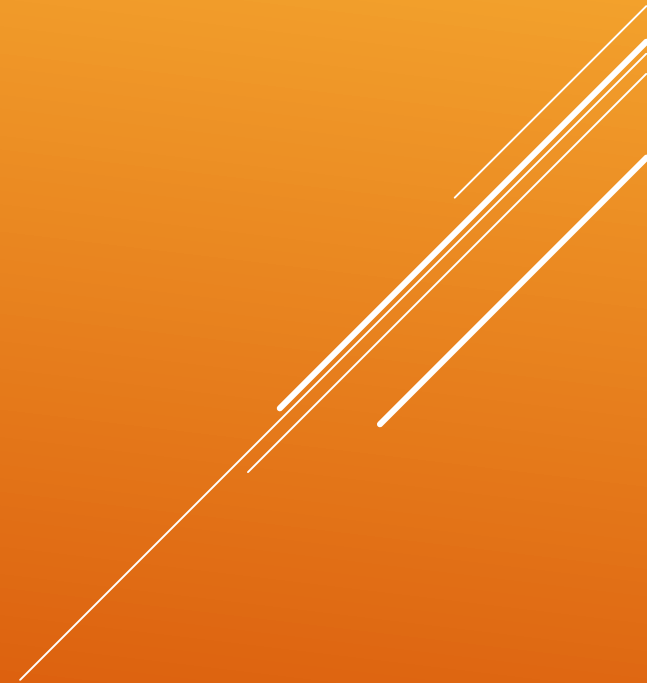

WHAT PREDICTION TOOLS ARE USE TO  
PREDICT THIS?

- ▶ The effects of a hailstorm are really bad it can make giant snowballs of ice. they are so strong the snow can rip through cars metal.

## WHAT ARE THE EFFECTS

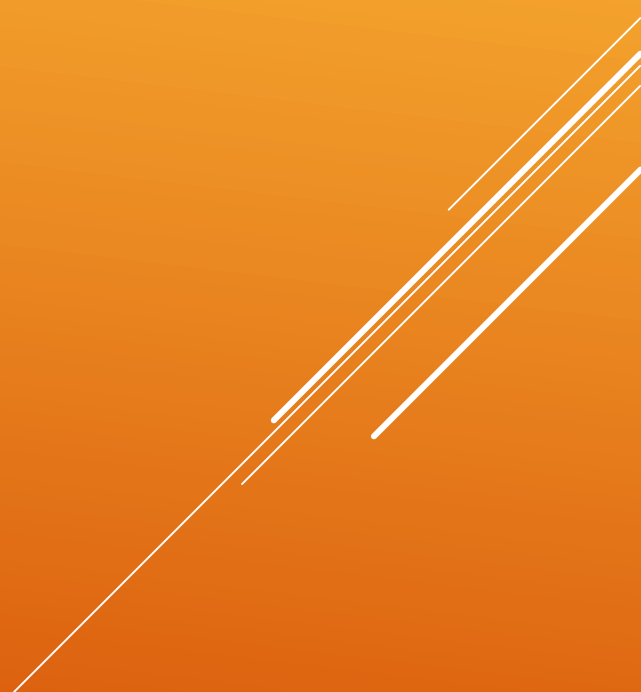

- ▶ Hailstorms are mostly common in a place called cumulonimbi. It spreads 2 miles long .

WHAT DOES A HAILSTORM MOSTLY  
OCCUR?

- ▶ To prepare for a hailstorm you need to inspect your roof if its strong enough to resist the hail. And replace your damaged shingles

## HOW TO PREPARE FOR A HAIL STORM?

HOW STRONG IS A HAILSTORMS  
IMPACT
